Please amend claim 40 as follows, solely to place the claim in independent form, without change in scope thereof:

--40. (Amended) A radio frequency data collection network comprising:
 a plurality of roaming data collection terminals;
 a plurality of base stations that transmit information packets periodically at each
of defined intervals;
 the plurality of roaming data collection terminals and the plurality of base stations
each having wireless transceivers; and
 each of said roaming data collection terminals selectively deactivates its wireless
transceiver for a consecutive plurality of the defined intervals, and then activates its
wireless transceiver to allow receiving the information packets;
wherein each of said roaming data collection terminals attempts to synchronize
activation of its wireless transceiver to receive information packets transmitted by at least
one of the plurality of base stations; and

[The radio frequency data communications system of claim 39,]

wherein the information packets transmitted by the plurality of base stations
comprise pending message indications. --
